.

Int , char , byte , boolean

int numOfLines = 5;

Int studentNum = 10;

{3,0,1}

## Declaration

data\_type var\_name[];

data\_type[] var\_name;

//ex: int nums[];

## Initialization

✓ var\_name = new data\_type[10]; 5

nums[0] = 10

✓ Nums = new int[] {2,3,1,5,6,}

nums[4]; //O(1)

Int num[] = new int[5];

boolean[] isVisited = new boolean[4];

```
Class Student {  
    String name;  
    Int age;  
}
```

Student st1 = new Student();

Student[] students = new Student[100];

Assigning Values

Nums[1] = 5;

Nums[4] = 100

Num[5] = 10;

heap

N  
A

→ st1

→ ST2

st2

Add

students[0] = new Student();  
students[0].name

```
Int num = nums[4];
```

↓  
100

```
Int num = new int[100];
```

:  
[~~9~~, ~~2~~, ~~8~~, ~~7~~, ~~8~~]. nums.length - 6

### Iteration - For Loop

```
for(int j = 0; j <= nums.length - 1; j++) {  
    System.out.print(nums[j]);  
}
```

// 3 1 4 6

### Iteration - For Each Loop

```
for(int number : nums) {  
    System.out.print(number);  
}  
For(dat_type var_name : array_name) {
```

}  
0 1 2 3 4

```
}  
Int[] nums = new int[5];  
Nums[0] = "xyz";
```
